

## Diabetes and its Co-Morbidities Update 2013

### Learning Objectives

During this didactic and case-based interactive program, delegates will:

- Consider and discuss current Canadian Diabetes Association guidelines for diagnosis and management in medicine and its subspecialties including cardiology, nephrology, neurology, obesity, hypertension and in obstetrics
- Consider a chronic disease model for the office management of patients with diabetes with a view to increasing practice efficiency and efficacy
- Discuss strategies for implementing change into clinical practice
- Review and discuss the use of natural medicines and therapies by patients with diabetes: the evidence base of these medicines and therapies, and the interactions with guidelines based medical care
- Consider the physician health implications of having a chronic disease such as diabetes

### Who Should Attend:

The program will appeal to Family Physicians and Specialists whose practice includes patients with diabetes
