

A Potpourri of Advances in Clinical Medicine Update 2014

Learning Objectives

This interactive program is structured to:

- To review recent advances in medicine and its subspecialties
- To consider how these recent advances might be integrated into clinical practice
- To consider how patient behaviours (internet, natural medicine and alternate therapies) affect clinical care
- To consider the evolution of clinical practice: EMR and chronic diseases management
- To review and consider issues that may affect a physician's health
- To develop a more global perspective on clinical issues in medical practice, health policy and administration (Global Health)

The program should appeal to generalists: family physicians and specialists.
