

## Cardio-Pulmonary Update 2013

### Learning Objectives

This interactive program is structured to:

- To review, discuss, and assess recent advances in cardiology and respiratory medicine
- To explore the heart/lung interface in clinical medicine through case discussions, workshops, and Journal Clubs
- To explore ways to integrate new learning into clinical practice
- To develop a personal and professional approach to health (Physician Health)
- To develop a more global perspective on issues relevant to medicine, patient health practices, health policy and administration (Global Medicine)

The program should appeal to generalists: family physicians and specialists who see patients with Cardio-Pulmonary issues in their practice.
